Germination Guide

Broadcast - generous seed packets, suitable for broadcast sowing in meadows

Winter - best success achieved by sowing then setting outside to let the seeds experience the natural temperature fluctuations of winter

A - Easy, warm germinator

C(n) - cold, moist stratification for n days

BW - Boiling water scarification before short period of cold

+ D - Surface sow; seeds need light to germinate

Seed Source

* Ottawa Valley or Eastern Ontario genotype

BA - seed collected from plants growing in the gardens at BA

BT - The only wild collected seed this year is Virgin's Bower (*Clematis virginiana*) which was collected from a hedgerow in Bristol Township, Quebec.
