Germination Codes

A - easy germination, just sow in the spring

C(n) - cold-moist stratify for n number of days

D - seeds need light to germinate, surface sow and do not cover

Winter - germination best if seed experiences a natural winter

BW - Boiling water scarification: pour boiling water over seeds and let cool and soak overnight, Drain. Often followed by a short period of cold-moist stratification

† collected from a stand of white Great Blue Lobelia - not all seeds will produce white-flowered individuals but there should be a high percentage of white-flowered plants from these seeds

* Ottawa Valley or Eastern Ontario genotype
